Education

The Ohio State University Columbus, OH
Bachelor of Science in Computer Science, Minor in Information Security, GPA: 3.7 *Expected May 2028*
Relevant Coursework: Data Structures and Algorithms, Software Components, Software Development and Design, Discrete Structures, Programming Methodology, Differential Equations, Linear Algebra, Database Systems, Computer Networks

Technical Skills

Languages: Java, Python, C/C++, JavaScript, Go, Kotlin, Rust, HTML/CSS, R, Assembly
Frameworks: React, Node.js, Next.js, Flask, Angular, FastAPI, Vite, React Flow, Pandas, NumPy, scikit-learn
Cloud & DevOps: AWS (Lambda, CloudFront, S3, API Gateway, DynamoDB, Kinesis, Data Firehose), Docker, Kubernetes, Jenkins, Git, GitHub, Linux, CI/CD, Google Cloud Platform (Cloud Run)
Tools & Platforms: PostgreSQL, Firebase, Elasticsearch, Kibana, Postman, Datadog, OpenAI API, DataGrip, JIRA

Experience

GoDaddy Tempe, AZ
Software Engineer Intern – Performance Marketing Team *May 2026 – Aug 2026*
- Cut AWS infrastructure costs by **$573k+** annually across **10** Elasticsearch clusters by migrating warm nodes to frozen storage, updating ILM policies, and monitoring shard draining in Kibana
- Eliminated **$14k+** annually by decommissioning **12** unused Kinesis streams after investigating consumers, analyzing CloudWatch metrics, and safely removing CloudFormation stacks while preserving infrastructure as code for production
- Lowered AWS Lambda costs by **10%** by leading the Functionbeat to AWS Data Firehose migration across multiple repositories and Kibana dashboards

GoDaddy Tempe, AZ
Software Development Engineer Intern – Customer Engagement Team *May 2025 – Aug 2025*
- Engineered an internal email builder Luma, using React, Vite, AWS Lambda, and CloudFront to replace legacy Salesforce workflows, achieving **90%** team adoption across **40+** marketers and engineers
- Reduced email creation time by **50%** and application latency by **40%** by optimizing React component rendering, streamlining frontend backend communication, and improving AWS Lambda request handling
- Increased subscription renewals by **12%** by implementing real time A/B testing for email campaigns, enabling marketers to compare campaign performance and optimize customer engagement

The Ohio State University Columbus, OH
Machine Learning Research Assistant *May 2024 – Aug 2024*
- Developed machine learning models using Python and scikit-learn to predict pedestrian congestion patterns from historical campus traffic data, supporting route planning for autonomous delivery robots
- Engineered data preprocessing pipelines using Pandas, NumPy, and NetworkX to integrate pedestrian traffic observations with university class schedules, preparing structured features for congestion prediction

Projects

Xtrinel | *(Next.js, Python, FastAPI, Docker, Google Cloud Platform, Datadog)* GitHub
- Enforced absolute data isolation across **4 tenants** with zero cross tenant access by engineering a FastAPI backend with tenant scoped queries, custom RBAC, and **45 automated tests**
- Reduced average API latency from **800ms** down to **240ms** using Datadog APM tracing to isolate query bottlenecks, containerizing microservices, and deploying to **GCP Cloud Run**

Build Flow AI | *(TypeScript, React, Node.js, Express, PostgreSQL, Vite, Groq API, Whisper)* GitHub
- Engineered a voice driven web application using a two stage LLM streaming pipeline to translate speech into React Flow diagrams, generating **100+** nodes and cutting planning time by **80%**
- Architected a robust synchronization engine with strict schema validation, error feedback retries, orphan edge pruning, and an add only merge strategy to safely auto save AI plans

GhostTraffic | *(Go, React, TypeScript, Vite, Docker, Python, FastAPI and PostgreSQL)* GitHub
- Built a high concurrency HTTP/1.1 reverse proxy and replay engine in **Go** to capture HTTP traffic into versioned JSONL logs and replay workloads under worker pools
- Engineered a differential response comparison suite and analytics dashboard surfacing real time latency percentiles (**p50**, **p95**, **p99**), status code mismatches, and regression metrics

CodeAtlas | *(Rust, Tree-sitter, petgraph, SQLite, Axum, React, TypeScript)* GitHub
- Engineered a local first static analysis engine in **Rust** using **Tree-sitter** and **petgraph** to parse TypeScript ASTs, resolve module dependencies, and detect circular references
- Designed an explainable change impact scoring algorithm combining historical Git co change frequency with reverse dependency graph traversal to simulate regression risks

Leadership and Professional Development

Minorities in Tech Columbus, OH
Chapter Vice President *Jan 2024 – Present*
- Organized **5-6** technical speaker events/semester with industry engineers, mentoring **200+** students
- Spearheaded technical interview preparation cohorts and resume workshops, directly assisting members in securing internships
